

# The 'sopra-seraphim' class

Documentation for the 'sopra-seraphim' class, version v1.0.07

Prepared by:

Florian Sihler

TO  
SPY

– **15. December 2019** –

This layout was created for the Softwaregrundprojekt in the winter semester of 2019/2020 by Florian Sihler as part of his computer science studies at Ulm University, entirely in  $\text{\LaTeX}$  2 $\epsilon$ .

- Dependencies
- Installation
- Further Particularities

## 4. Related Classes and Packages

## 2. Class Configuration

## 3. Command Overview

This  $\text{\LaTeX}$  2<sub>ε</sub> document class was written as part of the Sopra in the winter semester 2019 and summer semester 2020 and serves as the basis for the look of all documents of *Team 20*. The layout is based on **beamer**. For structural reasons, this documentation was prepared in the latter, so no titles are placed; the header adapts accordingly to this circumstance!

To visualize the individual code snippets, the **sopra-listings** package is used. It is not relevant for the use of the document class.

The corresponding class should also be embedded in this document:  
`sopra-seraphim.cls`.

This package is based on **beamer**, as well as the following packages (all passed arguments are also listed, whereby an asterisk is set in the case of a value being passed. An exclamation mark before an “argument” declares that this is an option that controls the loading of the package):

- **tikz**
- **fontenc**<sup>(T1)</sup>
- **inputenc**<sup>(utf8)</sup>
- **babel**<sup>(english,main=ngerman)</sup>
- **montserrat**<sup>(defaultfam,\*)</sup>
- **microtype**
- **nowidow**<sup>(all)</sup>
- **hyperref**<sup>(hidelinks)</sup>

All of these packages should be part of a common  $\text{\LaTeX}$  distribution (furthermore the TikZ library **calc** is also used).

The class is not distributed as a `.dtx` file, which is why the following options are available:

- The document class can be placed in the same directory as the document. In this case, the inclusion instruction reads:

```
\documentclass{sopra-seraphim}
```

- The document class can be placed in a subdirectory / in a directory shipped with the document. In this case, it is specified via the (relative) path:

```
\documentclass{./Mein/Pfad/zu/sopra-seraphim}
```

The class can be placed (using a symlink or something similar) into your own *texmf* tree. For example, on Linux using texlive the class can be placed here: `~/texmf/tex/latex/`. The directory can be created and then updated using **texhash** `~/texmf`. Now the class can be used like any other installed class:

```
\documentclass{sopra-seraphim}
```

*Note: for this purpose there is a Python3.5 script called `installer.py` which, when placed in the folder above, can take care of the installation/update.*

In version v1.0.07 (`\thesosversion`  $\rightarrow$  p. 19) there are no further particularities.

1. The 'sopra-seraphim' class
2. Class Configuration
  - Accepted Parameters
3. Command Overview
4. Related Classes and Packages

Like most, the document class accepts arguments. In addition to the arguments accepted for **article**, the ones listed below can be used, whereby for arguments with a “counter” option the one active by default is written first and the other in parentheses. Implicitly, this means:

```
\documentclass[setstyle]{sopra-seraphim}
```

is called. While this document is invoked with:

```
\documentclass[nosetstyle]{sopra-seraphim}
```

the style of other **sopra-\*** packages is not modified.

`setstyle`      `(nosetstyle)`

With `setstyle`, it is automatically checked which packages of the `sopra-collection` (<https://github.com/EagleoutIce/sopra-collection>) are loaded, and the corresponding styles are set to produce a consistent layout.

2. Class Configuration

3. Command Overview

- Setting Data
- Helpful When Setting Data
- Displaying the Data
- General Formatting Commands
- Colors

4. Related Classes and Packages

As a base class, the class does not add a large set of commands for the user. This task is left to the extending packages.

The following commands should be set in the preamble and also configure the metadata of the respective document (i.e. the document properties). They can be overwritten as often as desired (up to the point at which the document begins). *Developer note: all these fields are available via \sos@register@⟨Name⟩, or their 'short' variants via \sos@register@short@⟨Name⟩.*

**\brief[short]{ShortDescription}**

Sets the short description of the document to **ShortDescription**. It is shown at the bottom left of the title page. *Currently not used.*

`\authors[short]{AuthorList}`

This can be used to set the list of authors. It is recommended to use `\addAuthor` <sup>→ p. 18</sup> for this.

`\duedate[short]{YYYY-MM-DD}`

Sets the date of the document. `\DateConvert` <sup>→ p. 19</sup> is used for the conversion.

`\supervisor[short]{Name}`

Sets the supervisor to **Name**. This data field is not used in the base class.  
*Currently not used.*

`\keywords[short]{Keywords}`

Sets the keywords for the metadata to **Keywords**.

`\group[short]{Name}`

Sets the group of the respective author to **Name**.

`\groupnum[short]{Number}`

In case of a numbering (or symbol, etc.) of the group, sets this to **Number**.

```
\addAuthor{Name (Email)}
```

Adds an author to the list of authors (`\authors`  $\rightarrow$  p. 15). For example:

```
\addAuthor{Florian Sihler (florian.sihler@uni-ulm.de)}.
```

```
\setTeam{Name Number}
```

Allows `\group`  $\rightarrow$  p. 17 and `\groupnum`  $\rightarrow$  p. 17 to be set in a single call. For example:

```
\setTeam{Affenbande 42} or \setTeam{{Mega Team} A}.
```

## `\typesetAuthors`

Typesets the authors according to `showmail` with or without email address, so `\typesetAuthors` yields: Florian Sihler. With multiple authors, commas and the “and” are set correctly.

## `\thesosversion`

Outputs the current version of the `sopra-seraphim` document class. *Note: via `\value{sosversion}` the version can be obtained as a 4-digit number: 1007.*

```
\DateConvert{YYYY-MM-DD}
```

Converts a date into a nicer form, thus:

```
\DateConvert{2019-12-02} % → 02. December 2019
```

`\imptext{Text}`

Highlights **Text** as *very important*.

`\notetext{Text}`

Sets **Text** as an *incidental note*.

The following colors are available: `cprimary` ●, `cakzent` ●, `clight` ●, `cimportant` ●, `cwhite` ○ and `chighlight` ●.

2. Class Configuration

3. Command Overview

4. Related Classes and Packages

In the course of this  $\text{\LaTeX 2}_{\epsilon}$  document class, a few other packages have also come into being. As of the current build, the following exist (packages and classes without a link are included alongside this one and can be found here: <https://github.com/EagleoutIce/sopra-collection>):
